Among the new conditions, more markedly evident in Britain, the forerunner of Europe's industrial states, were the long-term effects of the severe Long Depression of 1873-1896, which had followed fifteen years of great economic instability. Businesses in practically every industry suffered from lengthy periods of low – and falling – profit rates and price deflation after 1873.

The stable political situation in Britain from around 1688, and British society's greater receptiveness to change (compared with other European countries) can also be said to be factors favouring the Industrial Revolution. In large part due to the Enclosure movement, the peasantry was destroyed as a significant source of resistance to industrialisation, and the landed upper classes developed ...

Abstract. MOST of what is known about the early development of the cotton industry in Britain can be found in Wadsworth and Mann's The Cotton Trade and Industrial Lancashire, 1600-1780.It appears that the manufacture of cotton came to Britain from the Low Countries in the sixteenth century, one of the range of 'new draperies' that was transforming the textile industry in the later ...

Henderson has brought together in English translation the journals of four foreign visitors who travelled in England and Scotland in the years immediately following the Napoleonic wars, in a way which may be regarded as ...

[Steam Workshop:World Congress Industrial Start](#)

Britain led the world into the Industrial Revolution and, for much of the 19th century, dominated international markets, thanks in no small part to the pre- eminence of Sheffield as a world centre of steel production and cutlery and edge- tool manufacture. For new generations familiar with today's computer- and service-based economy, these achievements may seem distant and scarcely relevant ...

[Industrial Revolution | Encyclopedia.com](#)

Firat, there was no great 'take-off' in industrialisation or productivity: in Britain industrial employment increased by just 12% between 1759 and 1851, similarly total factor productivity increased by just 0.4% a year until the 1830s. By 20th century standards such growth was underwhelming. Second, the 'great divergence' had already occurred by the time Britain was industrialising ...

[Industrial Britain - Sraggs.de](#)

Most historians say that the Industrial Revolution began in Great Britain around 1750. Before this time, people rarely traveled beyond their small villages. Rural people worked as subsistence farmers, meaning they grew crops to feed themselves and their families. Populations grew during the 18 th century and farmers increased food production to feed the larger population. Machines started to ...
